Compiler hardening: results so far

Completed point estimates: −2.60% to +1.32%

Runtime change versus ordinary reference. Negative = faster. Positive = slower. 0% = unchanged.

Coverage

12 complete conditions
1 partial
3 not measured

Missing: 8-node HDF5 + integrated

Sample counts

10 pairs per complete case
(20 process runs)

Partial: 4/10 pairs

One pair = full + reference

Provisional screenshot transcription, 16 Oct 2026. Error bars unavailable. Original build verification pending.

Matched callers and complete library stacks change together. Layouts may use different work.

Small point estimates do not prove zero overhead. *Exact 4-/8-node core counts are not visible in the photos.
